DNA Cell Biol. (1991) 10:671-679

Gene expression and cDNA cloning identified a major basic

protein constituent of bovine seminal plasma as bovine
monocyte-chemoattractant protein-1 (MCP-1).

NAF(44-72) is a preferred peptide derived from NAF which is nartagonistic to NAF and has no chemotactic activity. It inhibited NAF-induced migration by 34 per cent. When used with a second preferred peptide, i.e. NAF(3-25) (see R20236) inhibition was 70
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    W04515;

Synthesis of protein by chemical ligation of unprotected peptide(s)

Py reaction of N-terminal Cys with C-terminal thioester and

Py reaction of N-terminal Cys with C-terminal thioester and

Py spontaneous rearrangement of intermediate prod.

Example 3; Page 47; 61pp; English

The present peptide, which has an amino-terminal cysteine residue,

The present peptide, which has an amino-terminal cysteine residue,

Ist oligopeptide (OP) to a 2nd OP, end to end, to produce an OP

Product. This comprises mixing the 1st and 2nd OP (which have a

corpoxy-terminal thioester and an amino-terminal Cys with an

unoxidised SH side chain) in a solution containing a catalytic

Corticul. Condensing the terminal groups to form an intermediate OP,

Containing the bond to give a product OP linked by an amide bond.

Containing the bond to give a product to P linked by an amide bond.

Which can be made into native, disulphade containing proteins by

Conforming the size of protein that can be made by chemical

WPI: 93-196997/24.
New interleukin-8 analogues modified in specified region - used as neutrophil activators or for blocking effect of IL-8 on neutrophil(s) for treatment of inflammation.
Claim 23: page 30; 47pp; English.
The sequence is that of an analogue of interleukin-8 (IL-8) comprising competitive antagonist of IL-8, i.e. it can be used to treat act as a neutrophil activator and so can be used to treat act as a neutrophil activator and so can be used to stimulate an inflammatory response.

New interleukin-8 analogues modified in specified region - used as neutrophil activators or for blocking effect of IL-8 on neutrophil(s) for treatment of inflammation claim 9; Page 29; 47pp; English.

The sequence is that of an analogue of interleukin-8 (IL-8) comprising IL-8 residues 4-72. It is able to bind neutrophils and act as a competitive antagonist of IL-8, i.e. it can be used to treat inflammation, e.g. by intravenous injection or oral admin. It can act as a neutrophil activator and so can be used to stimulate an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Clark-Lewis I, Moser B;

"His is a novel chemokine-like protein (IL-8MB), based on This is a novel chemokine-like protein (IL-8MB), based on Interleukin-8 (IL-8), with 4 conserved cysteine residues. The Interleukin-8 (IL-8), with 4 conserved cysteine residues. The protein has been modified to include a mutation in the list sequence EIR (R99828, claim 10) before the 1st Cys residue, and sequence EIR (R99828, claim 10) before the 1st Cys residue. A version with an N-terminal Met residue. Sequence the 1st Gys residue. A version with an N-terminal Met residue. Sequence has been derived by mutagenesis of myelosuppressive activity. The novel chemokine shows similar active damains are required for altagonist to the wild-type, and may be used as an interleukin-8-contains the new of wild-type call before call the call of the contains and adjunctive artagonist to enhance myeloid cell proliferation, as an adjunctive gent in chemotherapy or radiation therapy, in therapy of myelogenous leukaemia, polycythaemia vera or hypermegakaryocytopoletic disorders,
                                                                                                                                                                                                                                                   ö
for treatment of inflammation Claim 10; Page 29; 47pp; English.

The sequence is that of an analogue of interleukin-8 (IL-8) comprising IL-8 residues Ala4Ala5 (6-72). It is able to bind neutrophils and act as a competitive antagonist of IL-8, i.e. it can be used to treat inflammation, e.g. by intravenous injection or oral admin. It can act as a neutrophil activator and so can be used to stimulate an inflammatory response.
                                                                                                                                                                                                                                                   Gaps

Claim 1: Column 4: 8pp: English.
A novel antibody, preferably a monoclonal Ab (MAb), has specific
binding affinity for a neutrophil chemotactic factor (NCF) having
the present amino-terminal sequence. The MAb can be used to
quantify, detect or localise the NCF in a sample, and treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Anti-neutrophil chemotactic factor antibody - useful to assay for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-100-1990 (first entry)
Sequence of a synthetic neutrophil chemotactic polypeptide (NCF)
Inflammation; anti-neutrophil chemotactic polypeptide antibody.
 or to detect, isolate and expand progenitor cells ex vivo for transplantation. The protein does not show adverse neutrophil activation or inflammatory side-effects.
                                                                                                                 ;

Claim 1; Page 35; 40pp; English.
The sequences given in W25701-14 represent interleukin-8 (IL-8) mutants which are capable of binding to IL-8 receptors. They can be used for modulating an IL-8 receptor-mediated biological response.
The mutanions were introduced into the human IL-8 coding sequence by

Claim 1; Page 35; 40pp; English.

The sequences given in W25701-14 represent interleukin-8 (IL-8) mutants which are capable of binding to IL-8 receptors. They can be used for modulating an IL-8 receptor-mediated biological response. The mutations were introduced into the human IL-8 coding sequence by
Claim 1; Page 35; 40pp; English.

The sequences given in W25701-14 represent interleukin-8 (IL-8)
mutants which are capable of binding to IL-8 receptors. They can
be used for modulating an IL-8 receptor-mediated biological response.

The mutations were introduced into the human IL-8 coding sequence by

1:swissprot swiss-prot37 Database:

Mean 25.651; Variance 29.190; scale 0.879 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

There appears to be a second beta-thromboglobulin-like human gene.

There appears to be a second beta-thromboglobulin-like human gene.

Connective-tissue activating peptides (CTAP) are a group of proteins capable of activating connective tissue cells. CTAP-I,

'II, 'III and 'P2, and 'PMN are of lymphoid, tumor cell, human platelet, and polymorphonuchear leukocyte origin, respectively.

TCTAP-III, a monomer isolated from platelets, stimulates DNA synthesis, mitosis, glycolysis, intracellular cAMP accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and secretion of plasminogen activator by human synovial cells.

Protecolytic removal of the first four residues of CTAP-III produces the active peptide beta-thromboglobulin, which is released from platelets along with platelet factor 4 and platelet-derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacza, M.L.; Reddigari, S.R.; Kornfeld, D.; Ramani, N.;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WPI: 94-200200/24.
Pure mammalian granulocyte chemotactic protein-2 - which stimulates granulocytes to secrete protease, used to develop prods. for treating inflammatory conditions
Disclosure; Page 29; 54pp; English.

Human GCP-2 was isolated from human MG-63 osteosarcoma (ATCC CRL 1427) cells, and cattle GCP-2 (R55844) from MDBK (ATCC CRL 6071) GCP-2 were also isolated and sequenced (R55845, TS5849).

Conserved region within mammalian GCP-2 is shown in sequence R55848.

Expression of DNA encoding GCP-2 in a host cell will provide
                                                                                                                                                                                  29-AUG-1995 (first entry)
Inflammatory peptide ENA-78.
Inflammatory Peptide; ENA-78; heparanase; heparin; heparan sulfate; arthritis; restenosis; cancer; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                     Screening for cods. with anti-heparanase activity - by detecting inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 12; Page 43; 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human vector, and expression in Sf9 cells in the presence of reduced Sequence 78 AA;

                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                      Pure mammalian granulocyte chemotactic protein-2 - which pure mammalian granulocytes to secrete protease, used to develop prods. Fureting inflammatory conditions Disclosure; Page 29; 54pp; English.

Disclosure; Page 29; 54pp; English.

Human GCP-2 (R5843) was isolated from human MG-63 osteosarcoma (ATCC CRL 1427) cells, and cattle GCP-2 from MDBK ATCC CRL 6071) cells. Naturally-occurring N·terminally truncated variants of human GCP-2 were also isolated and sequenced (R55845.47, R55849). A conserved region within mammalian GCP-2 is shown in sequence R55848. Expression of DNA encoding GCP-2 in a host cell will provide recombinant protein of use as an antiinflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps
 family of chemokines, has similarity to other alpha-intercrines involved in the chemo-attraction and activation of leukocytes. The nucleic acid sequence encoding NGCP and the protein can be used in the diagnosis and treatment of diseases such as leukaemia and other cancer, immune deficiencies or excessive immune responses. Comprision and as antivital agences

Claim 1; Page 60: 7Pp; English.

The present sequence represents mouse CKDLR201.1 chemokine protein

which comprises a plurality of epitopes. Host cells containing vectors

Comprising a nucleotide sequence encoding the protein are used to

produce recombinant protein. Treatment of a cell, particularly neuron,

macrophage or lymphocyte, carrying a G-protein coupled receptor (GPCR)

containing to sused to control physiological development, e.g.

control agencial is used to control physiological development, e.g.

alteration of calcium ion influx, a chemoattractant response, morphology,

control physiological development, e.g.

control physiological developments on the protein of sequences the KDLR201.1 protein, or GPCRs, are useful as primers or

conceptor activation and isolating related sequences and for

conceptor activation and isolating related sequences and for

expressing antigenic peptides. Antibodies (Ab) directed against the

conceptor activation and sevelopmental abnormalities); in screening for

probes, e.g. for developmental abnormalities); in screening for

containing drugs; to inhibit chemokine/receptor activation; (when coupled

containing antibodies. CKDLR201.1 protein and GPCRs and compounds

which bind them can be used to treat inflammation, e.g. asthma: as

antivital agents, and to treat abnormal cell proliferation, regeneration

containing action and atrophy. Therapeutic agents are administered orally, by

Sequence 160 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new macrophage derived chemokine, MDC, a member of the C-C (Cys-Cys) subfamily of cytokines has been isolated. MDC and it's analogues may be used in the treatment of inflammatory diseases especially diseases characterised by monocyte chemotaxis towards a site of inflammation. MDC and it's analogues also induce fibroblast proliferation having a positive effect in wound healing and angiogenesis. They may prove to be clinically important in the treatment of tumours, by directly or indirectly inhibiting tumour formation. Antibodies directed against MDC and its analogues may be used in the treatment of Crohn's disease, rheumatoid arthritis and atherosclerosis. Probes and/or primmers for the identification of MDC encoding sequences can be derived from MDC encoding sequences.
                                                               Pure or recombinant chemokine CKDLR201.1 - useful, e.g. for treating inflammation and as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11-SEP-1997 (first entry)
Human macrophage derived chemokine analogue.
MDC, macrophage derived chemokine; C-C; Cys-Cys; Crohn's disease;
rheumatoid arthritis; chemotaxis; fibroblast proliferation;
wound healing; anglogenesis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI: 97-052324/05.
WPI: 97-052324/06.
Macrophage derived chemokine (MDC) and analogues - used in the treatment of inflammatory diseases, MDC antibodies used to treat Crohn's disease, rheumatodia arthritis, etc.

Claim 17: Page 54: 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. In peptide synthesis, a C-terminal peptide (R70805, encoded by cDNA sequence Q85374) based on sequences for CTAP-III, platelet basic (R70809) based on CTAP-III and platelet basic protein were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 5; page 36; 60pp; English. Purified heparanses, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus

The sequences given in R86011-12 represent NAP-2V and NAP-2 which are a variant and the wild type form of neutrophil-activating peptide. These peptides were used in the method of the invention for increasing bone growth. NAP-2V is a cleavage product of the blatelet alpha-granule component platelet basic protein (PBP). It is related to NAP-2 in that NAP-2V has an additional 5 amino acids at its N-terminal. The N-terminal of NAP-2V resembles the N-terminus of human bone stimulating factor. These peptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neutrophil-activating peptide-2; NAP-2; cathepsin D; cleavage; beta-thromboglobulin; precursor; alpha-granules; blood; platelet; connective-tissue-activating peptide III; CTAP-III; analog; clot; platelet basic protein; PRP.
vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.
                                                                                                                                                                                                     ;

7 Initial Page 21, 43pp; English.

7 This polypeptide comprises a variant, termed NAP-2V, of neutrophilith polypeptide comprises a variant, termed NAP-2V, of neutrophilith polypeptide (NAP-2). Novel claimed polypeptides (see also crivating peptide (NAP-2). Novel claimed polypeptides (see also with (a) from 6-12 amino acid (AA) residues deleted from the vith (a) from 6-12 amino acid (AA) residues deleted from the creminus, (b) 7-49 AA deleted from the C-terminus, or (c) both (a) and contain no cysteine residues or at least 2 cysteine residues, preferably at positions 10 and 12. Also claimed are a chimneric bone stimulating factor comprising such polypeptides; an antibody which binds to the polypeptides; DNA creaments useful for recombinant production of the polypeptides and vectors comprising the DNA. The polypeptides are useful in the prevention of and increasing bone growth in mammals, especially for the treatment of osteoporosis (claimed).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
activating peptide-2 (NAP-2). NAP-2 is a potent neutrophil activating agent produced by the cathepsin D-mediated cleavage of the eleven N-terminal amino acids of beta-thromboglobulin. It may also be generated by the cleavage of two inactive precursors, connective-tissue-activating peptide III (CTAP-III) and platelet basic protein (RRP), which are stored in the alpha granules of blood platelets. NAP-2 or NAP-2 analogs, with homology of >80%, may be used to lower blood levels of circulating platelets and to reduce the clot forming abilities of these platelets.
                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening for cpds. with anti-heparanase activity - by detecting screening for cpds in heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 5: page 35: 60pp: English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                  Stimulating bone growth in mammals with neutrophil activating stimulating bone growth in mammals with neutrophil activating peptide(s) - partic. for diagnosis and treatment of osteoporosis claim 1; Page 23; 45pp; English.

The sequences given in R86011-12 represent NAP-2V and NAP-2 which are a variant and the wild type form of neutrophil-activating peptide. These peptides were used in the method of the invention for increasing bone growth. NAP-2V is a cleavage product of the platelet alpha-granule component platelet basic protein (PBP). It platelet alpha-granule component platelet basic protein (PBP) is related to NAP-2 in that NAP-2V has an additional 5 amino acids at its N-terminal. The N-terminal of NAP-2V resembles the N-terminus of human bone stimulating factor. These peptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
